

AURORA

Thank you for purchasing the CKECO class pack.

Your class pack contains:

- 30 x CKECO calculators, ideal for KS1 & KS2
- A Gratnells storage tray compatible with Gratnells' storage systems
- A clear plastic lid for secure storage
- A foam stacking insert which also enables easy stock counting
- A CD-ROM containing PC emulation software.

This CD-ROM software will run on your PC and when combined with an interactive whiteboard and projector will beam a large working replica of the calculator onto the whiteboard.

This giant working calculator is viewable to the whole class and it is also identical to the calculators being used by the students. The whiteboard calculator makes it much easier to demonstrate a calculation and also makes it much easier for the students to follow the keystrokes and calculation chain. The emulators provide a great solution for introducing calculators to Key Stage 1 and 2 pupils. They are simple to operate and easy to use and have been designed to integrate into an existing lesson plan with minimal fuss providing a simple to use, practical and fun solution. Also included on the CD in a printable format are test and answer sheets naming the functions performed by each key

The emulator is licensed for use by the whole school and can be placed on your network for shared use at the same time.
